	DEMENT	
	- 2 -	50X1-HUM
40	Kamenz airfield measures about 2,000 x 300 meters and was bordered by a 2-meter brick wall in the west and southwest and a board fence in the southeast and east. Two 2-story buildings were completed in the southern nortion of the field. A third building was still under construction. seven low wooden buildings in the southeastern corner of the field were also unoccupied. Several construction sites were seen	50X1-HUM
•	near Kamenz-Nord railroad station. Construction work was executed by the Fau Union Sued.	
1.	Corment. Kamenz airfield is at present not occupied by a training unit. The 602d VFL Regt previously stationed there is believed to have moved to Drewitz airfield. The shipping of fuel to the installation indicates that a re-occupation of the field is intended. However, this assumption is not supported by the fact that the runway matting was removed from the installation.	50X1-HUM
2.	Comment. This measure appears noteworthy. School No 500 conducts basic training and consists of three courses with a total of about 1,500 students.	50X1-HUM
